

Trial number: RD1003  
 Site: Bongeen  
 Co-operator: Chris Barry  
 Planting date: 09/06/10  
 Harvest date: NA

### Insecticide application

Timing 1: 22/09/10 - crop stages ~GS45-59

### Aphid control in Fitzroy barley

## **Yield impact**

Trial was not harvested due to extreme weather damage and lodging

## **Key messages**

- Highest aphid pressure in EGA Bellaroi durum (13/tiller) followed by Fitzroy barley and Livingston bread wheat (8/tiller)
- Both seed treatment rates gave significant levels of control until ~mid September
- Foliar application just prior to natural population collapse
