

Trial number: CFT0907
Site: Bithramere
Co-operator: Richard Bowler
Planting date: 01/06/09 (sown dry)
Harvest date: 27/11/09

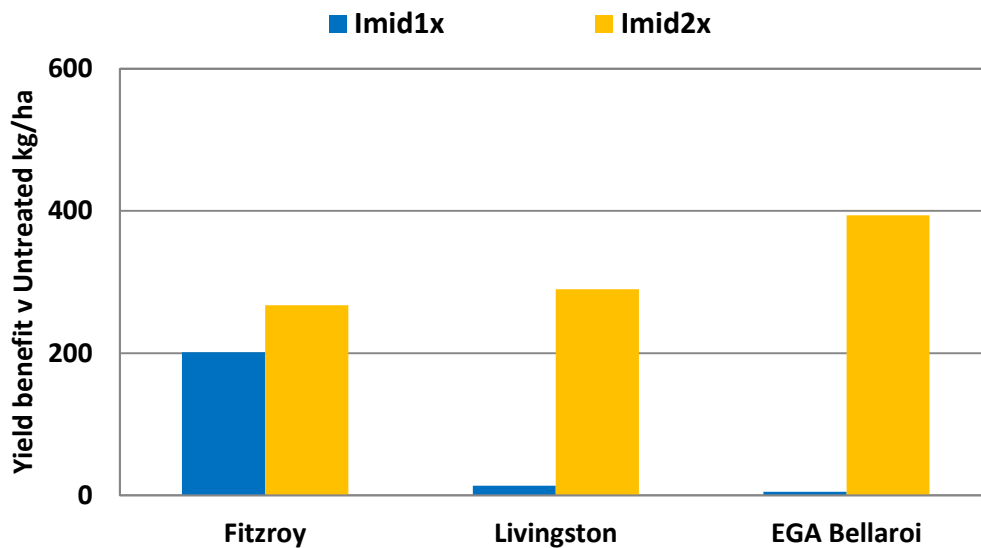

Insecticide application

Timing 1: No foliar application due to low aphid pressure

Aphid control in Fitzroy barley

Yield impact

No significant difference in yield between any treatment in any variety
 Trial cv=13%, untreated yields: Fitzroy 4200 kg/ha, Livingston 2980 kg/ha and EGA Bellaroi 1420 kg/ha

Key messages

- Variable yielding site with highest aphid pressure in Fitzroy (4/tiller) followed by EGA Bellaroi (1/tiller) then Livingston (<1/tiller)
- More consistent results from higher rate seed treatment but still not significant
- No impact on grain quality
