

4.2.3 MID SEASON CANOLA (VICTORIA)

Table 59: Mid Season Canola Results

	Streatham
Site mean:	2.37
CV%	11.9
Average LSD:	19.0
Rainbow t/ha	2.52

Findings:

No varieties or lines produced higher grain yields than the standard, Rainbow at Streatham. Castle and Charlton yielded particularly low at Streatham compared to Rainbow. Unremarkable yields by Hyola60 are worth noting given the variety has yielded very high compared to other varieties in the past 2 years. The application of Jockey to Rainbow and Sapphire did not affect those variety's grain yields.
