These results are related to the trial printed on page 93 in the *1998 Field Day Book*.

BACKGROUND

With the introduction of cropping on raised beds, southern areas of Victoria are likely to become a significant source of noodle quality wheat. There is a need to find out what the noodle quality of wheat from this area will be and how it compares to noodle wheat grown in the Wimmera.

RESULTS

Time Of Sowing 1

Variety	Mean t/ha
Janz	5.334
Rosella	4.88
Yanac	4.367

Average Time Of Sowing 1 Yield: 4.861 t/ha

Time Of Sowing 2

Variety	Mean t/ha
Janz	3.615
Rosella	3.418
Yanac	3.288

Average Time Of Sowing 2 Yield: 3.44 t/ha

Time Of Sowing 1 & 2

Variety	Mean t/ha
Janz	4.474
Rosella	4.149
Yanac	3.828

Overall average yield: 4.15 t/ha

The variety Janz outyielded both other varieties at both times of sowing.

The earlier time of sowing outyielded the later time of sowing.
